

Service Manual

Pioneer

ORDER NO.
RRV2165

MD/CD COMPONENT SYSTEM

X-MDX707 XR-C2MD

THIS MANUAL IS APPLICABLE TO THE FOLLOWING MODEL(S) AND TYPE(S).

Type	Model	Power Requirement	Remarks
	XR-C2MD		
LBWXJ	○	AC110V	
NLWXJ/HK	○	AC220V	

- X-MDX707 is combination of the following components.
- For speaker system S-C2-LR, refer to the service manual RRV2156.

Component	Model	Service manual	Remarks
	X-MDX707		
STEREO MD/CD CASSETTE DECK RECEIVER	XR-C2MD	RRV2165	This manual.
SPEAKER SYSTEM	S-C2-LR	RRV2156

1. SAFETY INFORMATION

This service manual is intended for qualified service technicians ; it is not meant for the casual do-it-yourselfer. Qualified technicians have the necessary test equipment and tools, and have been trained to properly and safely repair complex products such as those covered by this manual.

Improperly performed repairs can adversely affect the safety and reliability of the product and may void the warranty. If you are not qualified to perform the repair of this product properly and safely, you should not risk trying to do so and refer the repair to a qualified service technician.

LABEL CHECK

IMPORTANT
THIS PIONEER APPARATUS CONTAINS LASER OF CLASS 1.
SERVICING OPERATION OF THE APPARATUS SHOULD BE DONE BY A SPECIALLY INSTRUCTED PERSON.

LASER DIODE CHARACTERISTICS
OF CD PLAYER
MAXIMUM OUTPUT POWER: 5 mW
WAVELENGTH: 760 - 800 nm

LASER DIODE CHARACTERISTICS
OF MD RECORDER
MAXIMUM OUTPUT POWER: 40 mW
WAVELENGTH: 775 - 800 nm

Additional Laser Caution of CD PLAYER

1. Laser Interlock Mechanism

The position of the switch for detecting loading state is detected by the system microprocessor, and the design prevents laser diode oscillation when the switch is pressed physically.

Thus, the interlock will no longer function if the switch is released physically and deliberately.

Laser diode oscillation will continue, if pin 33 of CXA1782BQ (IC803) on the CD UNIT is connected to GND, or else the terminals of Q802 are shorted to each other (fault condition).

2. When the cover is opened, close viewing of the objective lens with the naked eye will cause exposure to a Class 1 laser beam.

Additional Laser Caution of MD RECORDER

Control method of the current through a laser diode.

The resistor R166 on the MD MOUNT ASSY (For MD mechanism assembly) are for the limiting of current through a laser diode.

Control method of the laser output power

The laser pick-up assembly provide the photo-diodes and APC (Auto Power Control) circuit.

The photo-diode detect output of the laser diode then IC201 control the APC circuit according to the signal voltage of the photo-diode via IC101.

Laser Interlock Switch

The loading position detect switch is set to " LOAD ON " position, IC201 get the " LOAD " signal, and hand the laser " LDON " signal to APC (Auto Power Control) circuit of the Laser pick-up assembly. Then a laser diode can be lighted when the " LOAD "signal is " LOAD ON " position.

2. EXPLODED VIEWS AND PARTS LIST

NOTES: ●Parts marked by "NSP" are generally unavailable because they are not in our Master Spare Parts List.
●The ⚠ mark found on some component parts indicates the importance of the safety factor of the part.
Therefore, when replacing, be sure to use parts of identical designation.
●Screws adjacent to ▼ mark on product are used for disassembly.

2.1 PACKING

(1) PACKING PARTS LIST

Mark	No.	Description	Part No.	Mark	No.	Description	Part No.

5. PCB PARTS LIST

NOTES: ● Parts marked by "NSP" are generally unavailable because they are not in our Master Spare Parts List.

- The Δ mark found on some component parts indicates the importance of the safety factor of the part. Therefore, when replacing, be sure to use parts of identical designation.

- When ordering resistors, first convert resistance values into code form as shown in the following examples.

Ex.1 When there are 2 effective digits (any digit apart from 0), such as 560 ohm and 47k ohm (tolerance is shown by J=5%, and K=10%).

560 $\rightarrow$ $56 \times 10^1 \rightarrow$ 561 RD1/4PU $\begin{smallmatrix} 5 & 6 & 1 \\ \hline \end{smallmatrix}$ J
 47k $\rightarrow$ $47 \times 10^3 \rightarrow$ 473 RD1/4PU $\begin{smallmatrix} 4 & 7 & 3 \\ \hline \end{smallmatrix}$ J
 0.5 $\rightarrow$ R50 RN2H $\begin{smallmatrix} R & 5 & 0 \\ \hline \end{smallmatrix}$ K
 1 $\rightarrow$ 1R0 RS1P $\begin{smallmatrix} 1 & R & 0 \\ \hline \end{smallmatrix}$ K

Ex.2 When there are 3 effective digits (such as in high precision metal film resistors).

5.62k $\rightarrow$ $562 \times 10^1 \rightarrow$ 5621 RN1/4PC $\begin{smallmatrix} 5 & 6 & 2 & 1 \\ \hline \end{smallmatrix}$ F

6. ADJUSTMENT
6.1 CASSETTE DECK SECTION

● Adjustment points and test points are shown in Fig.4 and Fig.6.

■ Adjustment

- The test tape is played. And, for the shape of waves of the test point (CN304 PB Lch and PB Rch) to become, for part A to become the maximum, and to minimize part B, the adjustment screw for azimuth is adjusted.
Both FORWARD and REVERS are adjusted. Do the screw lock to two places after the adjustment ends.

Fig. 1 Adjustment Points

■ Mechanical Adjustment

- Test tape: NCT-111 (3kHz, 30min).
- Tape Speed Adjustment

No.	Mode	Test Tape	Adjusting Points	Measurement Points	Adjustment Value	Remarks
1	PLAY	NCT-111 (Playback: 3 kHz)	adjustment screw	JA501 Head Phone Jack	3000 Hz $\pm$ 90Hz	

Fig. 2

Electrical Adjustment

Check the following before starting.

- (1) Confirm that the tape speed adjustment has been completed.
- (2) Clean the heads and demagnetize them using a head eraser.
- (3) Set the measurement level to 0 dBV = 1 Vrms.
- (4) Use the specified tape for adjustment. Use the labeled (A) side of the test tape.
STD-331E : For playback check
STD-632 : Normal blank tape
- (5) Provide yourself with the following measuring devices:
 - AC millivoltmeter
 - Low-frequency oscillator
 - Attenuator
 - Oscilloscope
- (6) Adjust both right and left channels unless otherwise specified.
- (7) Turn the DOLBY NR switch off unless otherwise specified.
- (8) Warm up the unit for several minutes before adjustment.
In particular, be sure to warm up the unit in the REC/PLAY mode for 3 to 5 minutes before starting recording/playback frequency characteristics adjustment.
- (9) Always follow the indicated adjustment order.
Otherwise, a complete adjustment may not be achieved.

Playback Adjustment

- (1) Head Azimuth Adjustment
- (2) Playback Level Adjustment

Recording Adjustment

- (1) Recording Bias Adjustment
- (2) Recording Level Adjustment.
- (3) ALC Operation Check

* When the tape is played with both of side panel L and R removed (state that reception front is floating from ground). when adjusting, the noise might be superimposed.
In this case, the front chassis must short circuit to the CD mechanism cover in the lead wire.

PLAY BACK

RECORDING

Fig. 5 Frequency Characteristics

■ Playback Adjustment

(1) Head Azimuth Adjustment

- Do not switch between forward and reverse operation with the screwdriver inserted.

Step	Mode	Input Signal/ Test Tape	Adjusting Points	Measurement Points	Adjustment Value	Remarks
1	PLAY	NCT-132X test tape (Playback: 10kHz, -20dB)	Head azimuth adjustment screw (Fig. 4)	CN304 PB L ch PB R ch	Max. playback signal level	After adjustment, apply silicon bond to the head azimuth adjustment screw.

(2) Playback Level Adjustment

- Since this adjustment determines playback Dolby NR level, perform it carefully.

Step	Mode	Input Signal/ Test Tape	Adjusting Points	Measurement Points	Adjustment Value	Remarks
1	PLAY	NCT-132X test tape (Playback: 315Hz, 0dB)	L ch VR101 R ch VR201	CN304 PB L ch PB R ch	-8.2 dBV	

■ Recording Adjustment

(1) Recording Bias Adjustment

Step	Mode	Input Signal/ Test Tape	Adjusting Points	Measurement Points	Adjustment Value	Remarks
1	REC	Load the STD-632 test tape and set the recording mode.	VR301	CN305 REC BIAS	13.5V ± 0.5V	

- Since this adjustment affects recording bias, prevent distortion from increasing due to underbias.

(2) Recording Level Adjustment

Step	Mode	Input Signal/ Test Tape	Adjusting Points	Measurement Points	Adjustment Value	Remarks
1	REC	Input a 400Hz signal to the AUX terminal and set the input selector to AUX.	125mV is input.	CN304 REC L ch REC R ch PB L ch PB R ch	-22.5 ± 1dB -18.4 ± 1dB	
2	REC→ PLAY	Load the STD-632 test tape and record/playback the 400Hz signal.	L ch VR102 R ch VR202	CN304 PB L ch PB R ch	Repeat recording, playback and adjustment until playback level of the 400Hz signal becomes -18.4dBV ± 1.0dB.	

(3) ALC Operation Check

Step	Mode	Input Signal/ Test Tape	Adjusting Points	Measurement Points	Adjustment Value	Remarks
1		Load the STD-632 test tape and input a 315Hz signal to the AUX terminal and set the input selector to AUX.	400mV is input.		-12.2 ± 1.0dBV	
2	REC		The input level of procedure 1 is set and the level is set to 1.25V.	CN304 REC L ch REC R ch	-9.7 ± 1.5dBV	

Fig. 6 Adjustment Points

6.2 MD SECTION

Because material was not able to be acquired when the service manual is made, the adjustment of MD is not published.

6.3 CD SECTION

CD UNIT is taken out according to the procedure of DISASSEMBLY. And, please adjust the part CD after connecting connectors.

6.3.1 PREPARATIONS

(1) Jigs and Measuring Instruments

 CD TEST DISC (YEDS-7)	 ⊖ Precise screwdriver	 ⊖ screwdriver (small)	 ⊕ screwdriver (medium)
 ⊕ screwdriver (large)	 Low-frequency oscillator	 Dual-trace oscilloscope (10 : 1 probe)

(2) CD MECHA

CAUTION

- The CD mechanism should not disassemble when repairing and exchanging Pick-up Unit.
- When the exchange of Carriage 100, 200, 300, and the part Clamper and something wrong with the loading operations is repaired, it is necessary to disassemble the CD mechanism. Please disassemble and repair according to the following procedures.
- If Tray Panel Set is not detached when the CD mechanism is repaired, the CD mechanism cannot be removed from the main body of the product.
- When Drawer was not able to open and shut by some something wrong's (The power supply does not enter, etc.) occurring, and remove Tray Panel Set, Slider 2 of the CD mechanism is moved from the ditch of the chassis on the bottom side of the product with a minus driver and Drawer is drawn out. Afterwards, please remove Front Unit after removing Tray Panel Set.

■ PICK-UP UNIT

■ CAUTION FOR DISASSEMBLY/ASSEMBLY OF CD MECHA

1. As for the distinction method of Carriage100, 200, and 300, Switch distinguishes the shape of the projection part on its back. Please confirm the number seal pasted to the surface of Carriage and the projection shape of the figure below when you exchange it.

Method of distinguishing the back of Carriage.

Method of distinguishing surface of Carriage.

2. Please do not disassemble Assy Holder L, R and the inside of and Drawer, and do not disassemble Assy Gear Drive which connects Assy Holder L with R. (The position match of each gear is necessary)
3. Please do not lose the gear (Bevel Gear 4 and Gear Idler A) not fixed while put in the axis.

4. Carriage 300 is put in the Chassis side, and please put in the Drawer side without fail in order of Carriage 100 and 200.

■ DRAWER

■ CHASSIS

DISASSEMBLY OF CARRIAGE 100, 200

ASSEMBLY OF CARRIAGE 100, 200

(Carriage 100 is No.1 carriage. Carriage 200 is No.2 carriage.)

• Notes of procedure ③.

④-1 The other side of the side applied by ③ of Carriage is lightly pushed.

④-2 Puts Carriage 100 on Carriage 200 which applies by ④-1. Be careful about notes by ③ at this time.

⑤ Bevel Gear is turned clockwise.
(direction of a rear side from a front side)

⑥-1 Carriage 200 moves to a front side.

⑥-2 Bevel Gear is turned as it is clockwise.
(direction of a rear side from a front side)

⑥-3 Carriage 100 drops below.

- 
- ⑦ Carriage 200 is lightly lifted by the finger.
- ⑦ When Carriage 100 drops below, Carriage 200 is lightly lifted by the finger.
Note : Lift it horizontally when you lift Carriage. Carriage inclines when it is not the horizontal, and mechanism locks.
- ⑧ Bevel Gear is turned clockwise (direction of a rear side from a front side) like the state of ⑦ .
- ⑨ Carriage 200 lifts up. And, when the movement is started Carriage 100 to the direction of a front side, separates the hand which lifted Carriage 200.

- 
- ⑩ Keeps turning Bevel Gear clockwise (direction of a rear side from a front side) until Carriage 100 bumps to the wall on a front side.

- 
- ⑪ The position of a right and left, black cam is matched while confirming it from the table side of Drawer.

■ ASSEMBLY OF DRAWER AND CHASSIS

The following work is done before Drawer is put on Chassis.

- (1) It is confirmed that Carriage 300 is clamped, and Clamper has fallen.
- (2) It is confirmed to Drawer to be built in neatly in order of Carriage 200 and 100.
- (3) Arm Stopper B is moved horizontally (inside) as shown in the figure below. (A)
- (4) Pulls Slider 2 until the lock comes off to the direction of ta front side. (B)

Note : Do not lift Arm Stopper B for above when you move Arm Stopper B.

There is a possibility to bend the spring when Arm Stopper B is lifted, and the spring bends. And, when Arm Stopper B becomes floatage feeling, Drawer is caught.

- ① This ○ part of Drawer is put on Chassis like the arrow.

- ② The lac teeth and Gear Idler A are matched, and it is pressed under the diagonal lightly.
- ③ Right this side of Drawer is lifted.
- ④ Drawer is moved back and forth, and stops Drawer with the point which it enters left.
- ⑤ Its right side is slowly lowered up to the angle by which Bevel Gear can do in the slide while doing Drawer back and forth by about 5mm.

- ⑥ Bevel Gear is done in the slide in the middle of Pulley C and Carriage 300.

- ⑧ When peeps from the inside of Drawer when the receiving part of Gear is fixed into the concave part of Bevel Gear, the place where it is fixed is comprehensible.
